

URGENT SAFETY & INSTALLATION UPDATE: Binding Mounting Hardware

Please read this notice carefully before your next ride. This update contains mandatory safety instructions regarding the hardware used to mount your bindings to the ShredLORD.

1. **The Requirement:** Due to the varying thickness of binding baseplates across different brands (e.g., Burton, Union, Salomon), the screws provided in the initial package may not be suitable for every Binding-ShredLORD connection.

2. **Use of Original Binding Hardware:** If the screws provided by Fusionride are shorter than the original screws that came with your bindings, we recommend using your original binding manufacturer's hardware.

3. **The hardware for mounting the ShredLORD to the snowboard remains unchanged;** use only the hardware provided in the Fusionride package for the ShredLORD-Board connection.

If you remain in doubt, you can also reach out to us directly with any questions or uncertainties.

Your safety is our absolute priority. Please perform this check immediately.

Thank you,

Team Fusionride
